

Geometry Study Cards by Tutor In a Book

Why Study Cards? Successful geometry students know and understand the language of geometry, i.e. the postulates, the theorems and the definitions. Moreover, educational research has repeatedly shown that study cards are best practices for learning this type of material. This is because study cards chunk the information into manageable sized pieces. Also, the cards are simple to access so studying them is convenient and students achieve mastery more easily. Another advantage is that since review is easy and handy, students are better able to retain what they have learned. Tutor in a Books cards skillfully cover the many concepts that students need to master. Tutoring expertise is built into the cards. Illustrations are used to visually demonstrate the meaning of many concepts. Examples, including examples using numbers, are included for those theorems and definitions that skilled tutors and teachers know students find more difficult to understand. Many teaching tips and hints are included to support student learning. Memory tips are given where useful. Hundreds of sketches assist the student to visualize, understand and retain information. Although the cards can be used on black and white devices, the cards are drawn in color because studies show that color improves retention. Additionally, color coding is used where appropriate, to help the student recognize the pattern of the concept being studied. These are not flip flash cards as many prompts would be ambiguous and therefore, not helpful to the student. The set includes 183 cards and contains both a navigational Table of Contents and a detailed list of card topics.

: Common Core High School: Geometry Secrets Study Guide: CCSS Test Review for the Common Core State Standards Initiative (9781627330404): CCSS Exam Secrets Test Prep Team: Books.
