

Special Report: The Top Ops Predictions for 2015: FTF News has gathered in a special report the coverage that helps us make predictions for the top operations management issues for 2015.

For this report, FTF News reached out to industry participants, analysts and vendors to get a sense for the operations issues that will be top of mind for financial services firms during 2015. We uncovered a variety of concerns including fears over the future of the Legal Entity Identifier standard, concern over shorter settlement cycles in the U.S., the demands European firms face via the TARGET2-Securities and Central Securities Depositories regulations, and the hope that midsize firms could shine this year. On the horizon, we foresee the growing importance of the SEC's consolidated audit trail, the rise of interest rates and volatility, the ongoing flow of regulation, new data infrastructure ideas for risk management, U.S. firms coping with Basel III, and new clearing realities for the futures markets.

(Editors Note: Financial Technologies Forum (FTF) recently held its gala Among the top honors is the Ops Business Person of the Year trust to enable us to have the right people empowered to do the right How do you manage the speed issue in your decision-making process?
